DETAILED ACTION

Allowable Subject Matter

1. The indicated allowability of claims 1, 2, 4-6, 9, 10, and 12 is withdrawn in view of the newly discovered reference to Chan et al. (Chan; 5,764,745). Rejection based on the newly cited reference follows.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to

consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

5. Claims 1, 2, 4-6, 9, 10, and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gillespie (US 6,823,048 B2; previously applied) in view of Chan (cited and applied for the first time) and further in view of Lewis et al. (Lewis; US 6,532,490 B1; previously cited and applied for the first time).

Regarding claims 1, 2, 4, 5, 9, 10, and 12, the entire patent to Gillespie plainly and completely teaches by name the claimed method and apparatus for calling name caching in communication networks.

With respect to the limitations recited in claims 6, refer to column 5, lines 26 – 35.

Gillespie differs from the claimed invention in that Gillespie is silent with respect to querying the remote database by the local cache. However, Chan plainly teaches querying a remote database by a local database (see Abstract, penultimate sentence). Therefore, it would have been obvious even to ordinary skill in the art the time of the invention to modify the system of Gillespie to query the remote database(s) directly from the local cache as taught by Chan in order to save time and resources.

Gillespie in view of Chan further differs from the claimed invention in that Gillespie in view of Chan is silent with respect to querying over a signaling network different from a communication network carrying calls. However, Lewis plainly teaches performing secondary queries over a signaling network different from communication network carrying calls (see Figs. 1-3 which clearly show a separate PSTN). Therefore, it would have been obvious even to one of ordinary skill in the art at the time of the

invention to modify the system of Gillespie in view of Chan to perform queries over a signaling network different from a communication network carrying calls as taught by Lewis since the motivation of out of band signaling is well established in the telephony art.
